

Earth & Space Science

Topics covered will include:

Solar system overview; terrestrial planets vs gas giants; scale of the universe; portraits of each planet and associated moons; meteorology of Earth and other worlds; magnetospheres; asteroids and comets; craters; Earth design (the biblical context); Galilean satellites and Titan; ice giants and ice dwarfs; planetary cores and differentiation. We will use lecture, reading, creative writing, quizzes and reports to achieve all class goals.

Please note: We will be using a book second semester, but no need to worry about that for now. I may still be able to get my author's discount for us on copies when the time comes.
